

Congratulations

To Ms Blair and the Eco-Group

Supporting the green recovery in
Scotland's communities

St Modan's High School have been awarded a grant of £5368.90 for a Food Waste Composter to help the St Modan's Community to reduce local carbon emissions through converting our food waste into compost. We will soon be taking delivery of The Ridan food waste composter system which consists of a manually powered composting machine and a maturation box which will enable the school to recycle large quantities of food waste or any bio-degradable vegetation into healthy, nutritious compost. We then use the compost in our On the Roof Project and the tiny Farm. The Eco-Group will be developing a system in school in due course so we can dispose of our food waste in a sustainable way!

Ridan Composter

Well done to all involved and thank
you to the Community Climate Action
Fund for enabling us to do this!
